

# HealthCheck for Azure

Assess physical and virtual infrastructure, provide in-depth reporting per node, make informed decisions on costs, and plan smooth migrations.

## Microsoft reports 120,000 Azure new subscriptions every month.

Expand your services and revenue streams around the fast-growing cloud infrastructure platform, Azure. If you are just starting to sell Azure, it can be hard to know where to begin the conversation with your customers—especially if you don't have deep experience in infrastructure.

## HealthCheck for Azure makes it easy to get started.

BitTitan HealthCheck for Azure transforms Azure assessments by giving you the data you need to illustrate true ROI and create what-if scenarios with the corresponding workload migrations and consumption. Help your customer explore immediate needs and long-term goals that lead to Azure consumption and recurring revenue for your business.

## How It Works

### Deploy & Scan

Deploy the HealthCheck for Azure agent in the customer's environment. Let HealthCheck for Azure scan and collect detailed information about each physical and virtual machine.

### Report

See estimated costs of moving to Azure, by hardware or by workload. Access detailed reporting about each node along with a downloadable Assessment Report to share with your customer.

### Plan

Find dependencies between nodes and applications. Learn the cloud readiness of each node and set up optimal migration settings and firewall rules.

## The agent collects data on the following:

Processor time

Disk IOPS and disk mappings

Uptime

Network usage and services

Memory and application usage

Ports used

Disk usage and access

Ingress and egress communication

## Perform a thorough readiness check and gather infrastructure data.

Collect usage and workload data over a period of 14 days to help identify trends and patterns that allow for accurate right-sizing. Visualize virtual and physical servers to identify dependencies and workloads, even identify security risks and shadow IT.

## Help the customer make informed decisions with detailed cost-analysis.

Track maximum, minimum and average workloads during the assessment to accurately project total cost of ownership in the cloud. Adjust SLTs, change data center regions, and offer capacity planning tools. HealthCheck for Azure can also integrate special pricing you have as a Microsoft partner.

## Prepare for safe migration with planning tools.

Optimize configurations based on performance needs, rather than matching them to existing hardware. Build plans and configurations to show best and worst-case scenarios. Explore multiple configuration mappings for detailed migration strategy plan, including what-if analysis scenarios and infrastructure planning. Then choose optimal migration settings and firewall rules to prepare for a smooth migration.

# Key Benefits of BitTitan HealthCheck for Azure

- Pass on right-sized savings when you bundle by workload across servers.
- Use real customer data and deeper analytics through the agent-based approach.
- Generate accurate pricing based on your contract and discounts instead of estimates or list prices.
- Map workloads to the appropriate data center to price accurately and along compliance guidelines for that region.
- Export the raw data collected by HealthCheck for Azure to your preferred software for data analysis to tailor your assessments to your business and customer.

Get started with HealthCheck for Azure through the MSPComplete® platform.

### About BitTitan

BitTitan is the global leader in Managed Services Automation, transforming technology services providers into modern managed services providers. We create a world where organizations can focus on what they do best; a world where people can focus on what makes them successful. Our MSPComplete® platform empowers organizations to realize their maximum potential through business process automation. Technology is invisible. Companies work better. People are happier.
